Vantage Hearth

UNVENTED (VENT-FREE) GAS LOG HEATER OWNER'S OPERATION AND INSTALLATION MANUAL

hearth products be installed and serviced by professionals who are certified in the U.S. by the National NFI Gas Specialists.

REMOTE CONTROL READY BURNER SYSTEM MODELS VD1824NR AND VD1824PR FOR USE WITH LVD18-GO, LVD24-GO, LVD18-PP, LVD24-PP, LVD18-CH AND LVD24-CH LOG SETS

Also Design-Certified As Vented Decorative Appliances

MARNING: If the information in this manual is not followed exactly, a fire or explosion may result causing property damage, personal injury or loss of life.

- Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.
- WHAT TO DO IF YOU SMELL GAS
 - · Do not try to light any appliance.
 - Do not touch any electrical switch; do not use any phone in your building.
 - Immediately call your gas supplier from a neighbor's phone. Follow the gas supplier's instructions.
 - If you cannot reach your gas supplier, call the fire department.
- Installation and service must be performed by a qualified installer, service agency or the gas supplier.

INSTALLER: Leave this manual with the appliance. CONSUMER: Retain this manual for future reference.

SAFETY

WARNING: Improper installation, adjustment, alteration, service or maintenance can cause injury or property damage. Refer to this manual for correct installation and operational procedures. For assistance or additional information consult a qualified installer, service agency or the gas supplier.

A WARNING: This appliance is for installation only in a solid-fuel burning masonry or UL127 factory-built fireplace or in a listed ventless firebox enclosure. It is design-certified for these installations in accordance with ANSI Z21.11.2. Exception: Do not install this appliance in a factory-built fireplace that includes instructions stating it has not been tested or should not be used with unvented gas logs.

WARNING: This is an unvented gas-fired heater. It uses air (oxygen) from the room in which it is installed. Provisions for adequate combustion and ventilation air must be provided. Refer to <u>Air for Combustion and Ventilation</u> section on page 6 of this manual.

This appliance may be installed in an aftermarket,* permanently located, manufactured (mobile) home, where not prohibited by local codes.

This appliance is only for use with the type of gas indicated on the rating plate. This appliance is not convertible for use with other gases.

^{*} Aftermarket: Completion of sale, not for purpose of resale, from the manufacturer

SAFETY

Continued

WARNING: This product contains and/or generates chemicals known to the state of California to cause cancer or birth defects or other reproductive harm.

IMPORTANT: Read this owner's manual carefully and completely before trying to assemble, operate or service this fireplace. Improper use of this fireplace can cause serious injury or death from burns, fire, explosion, electrical shock and carbon monoxide poisoning.

DANGER: Carbon monoxide poisoning may lead to death!

Carbon Monoxide Poisoning: Early signs of carbon monoxide poisoning resemble the flu, with headaches, dizziness or nausea. If you have these signs, the heater may not be working properly. Get fresh air at once! Have heater serviced. Some people are more affected by carbon monoxide than others. These include pregnant women, people with heart or lung disease or anemia, those under the influence of alcohol and those at high altitudes.

Natural and Propane/LP Gas: Natural and propane/LP gases are odorless. An odormaking agent is added to the gas. The odor helps you detect a gas leak. However, the odor added to the gas can fade. Gas may be present even though no odor exists.

Make certain you read and understand all warnings. Keep this manual for reference. It is your guide to safe and proper operation of this heater.

WARNING: Any change to this heater or its controls can be dangerous.

WARNING: Do not use a blower insert, heat exchanger insert or other accessory not approved for use with this heater.

WARNING: Do not allow fans to blow directly into the fireplace. Avoid any drafts that alter burner flame patterns. Ceiling fans can create drafts that alter burner flame patterns. Altered burner patterns can cause sooting.

Due to high temperatures, the appliance should be located out of traffic and away from furniture and draperies.

Do not place clothing or other flammable material on or near the appliance. Never place any objects on the heater.

Heater base assembly becomes very hot when running heater. Keep children and adults away from hot surface to avoid burns or clothing ignition. Heater will remain hot for a time after shutdown. Allow surface to cool before touching.

Carefully supervise young children when they are in the room with heater. When using the hand-held remote accessory, keep selector switch in the OFF position to prevent children from turning on burners with remote.

You must operate this heater with a fireplace screen in place. Make sure fireplace screen is closed before running heater.

Keep the appliance area clear and free from combustible materials, gasoline and other flammable vapors and liquids.

SAFETY

Continued

- This appliance is only for use with the type of gas indicated on the rating plate. This appliance is not convertible for use with other gases.
- Do not place propane/LP supply tank(s) inside any structure. Locate propane/LP supply tank(s) outdoors (propane/LP units only).
- 3. If you smell gas
 - · shut off gas supply
 - · do not try to light any appliance
 - do not touch any electrical switch; do not use any phone in your building
 - immediately call your gas supplier from a neighbor's phone. Follow the gas supplier's instructions
 - if you cannot reach your gas supplier, call the fire department
- 4. This heater shall not be installed in a bedroom or bathroom, unless installed as a vented appliance. See <u>Installing Damper Clamp Accessory for Vented Operation</u>, page 11. This gas log set may not be installed as a vented appliance in a bedroom or bathroom in the Commonwealth of Massachusetts.
- 5. Before installing in a solid fuel burning fireplace, the chimney flue and firebox must be cleaned of soot, creosote, ashes and loose paint by a qualified chimney cleaner. Creosote will ignite if highly heated. A dirty chimney flue may create and distribute soot within the house. Inspect chimney flue for damage. If damaged, repair flue and firebox before operating heater.
- Do not burn solid-fuel in a masonry or UL127 factory-built fireplace in which a vent-free room heater is installed.
- If fireplace has glass doors, never operate this heater with glass doors closed. If you operate heater with doors closed, heat buildup inside fireplace will cause glass to burst. Make sure there are no obstructions across openings of fireplace.
- 8. To prevent the creation of soot, follow the instructions in *Cleaning and Maintenance*, page 22.

- Before using furniture polish, wax, carpet cleaner or similar products, turn heater off. If heated, the vapors from these products may create a white powder residue within burner box or on adjacent walls and furniture.
- 10. This heater needs fresh, outside air ventilation to run properly. This heater has an Oxygen Depletion Sensing (ODS) safety shutoff system. The ODS shuts down the heater if enough fresh air is not available. See <u>Air for Combustion and Ventilation</u>, page 6. If heater keeps shutting off, see *Troubleshooting*, page 24.
- 11. Do not run heater
 - where flammable liquids or vapors are used or stored
 - · under dusty conditions
- 12. Do not use this heater to cook food or burn paper or other objects.
- 13. Do not use heater if any part has been exposed to or under water. Immediately call a qualified service technician to inspect the room heater and to replace any part of the control system and any gas control which has been under water.
- Do not operate heater if any log is broken.
 Do not operate heater if a log is chipped (dime-sized or larger).
- 15. Turn heater off and let cool before servicing, installing or repairing. If optional remote control is used, make sure the selector switch is in the OFF position. Only a qualified service person should install, service or repair heater.
- 16. If optional remote control is used, make sure the selector switch is in the OFF position when you are away from home for long periods of time.
- 17. Operating heater above elevations of 4,500 feet may cause pilot outage.
- To prevent performance problems, do not use propane/LP fuel tank of less than 100 lb. capacity (propane/LP units only).
- Provide adequate clearances around air openings.

PRODUCT IDENTIFICATION

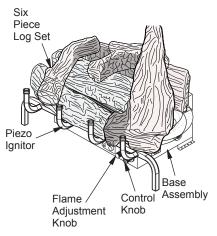

Figure 1 - Product Identification

OPTIONAL REMOTE **CONTROL ACCESSORIES**

There are four optional remote controls that can be purchased separately for:

- · wall switch
- · wall thermostat
- · hand-held ON/OFF remote
- · hand-held thermostat remote

See Accessories, page 34.

The wall thermostat or hand-held thermostat may not be used where vented decorative listing is required.

UNPACKING

A CAUTION: Do not remove data plates from grate assembly. Data plates contain important warranty and safety information.

1. Remove logs and heater base assembly from cartons.

Note: Do not pick up heater base assembly by burners. This could damage heater. Always handle base assembly by grate.

- 2. Remove all protective packaging applied to logs and heater for shipment.
- 3. Check heater for any shipping damage. If heater is damaged call FMI PRODUCTS. LLC at 1-866-328-4537 for replacement parts before returning to dealer.

LOCAL CODES

Install and use heater with care. Follow all local codes. In the absence of local codes, use the latest edition of The National Fuel Gas Code, ANSI Z223.1/NFPA 54*.

*Available from:

American National Standards Institute, Inc. 1430 Broadway

New York, NY 10018

National Fire Protection Association. Inc. Batterymarch Park Quincy, MA 02269

Note: Where listed vented decorative logs are required, thermostat operation is not permitted

State of Massachusetts: The installation must be made by a licensed plumber or gas fitter in the Commonwealth of Massachusetts

Sellers of unvented propane or natural gas-fired supplemental room heaters shall provide to each purchaser a copy of 527 CMR 30 upon sale of the unit.

Vent-free gas products are prohibited for bedroom and bathroom installation in the Commonwealth of Massachusetts.

PRODUCT FEATURES

OPERATION

This heater is clean burning. It requires no outside venting. There is no heat loss out a vent or up a chimney. Heat is generated by both realistic flames and glowing coals. This heater is designed for vent-free operation with flue damper closed. It has been tested and approved to ANSI Z21.11.2 standard for unvented heaters. State and local codes in some areas prohibit the use of vent-free heaters. This heater may also be operated as a vented decorative (ANSI Z21.60) product by opening the flue damper.

SAFETY DEVICE

This heater has a pilot with an Oxygen Depletion Sensing (ODS) safety shutoff system. The ODS/pilot is a required feature for vent-free room heaters. The ODS/pilot shuts off the heater if there is not enough fresh air.

PIEZO IGNITION SYSTEM

This heater has a piezo ignitor. This system reguires no matches, batteries or other sources to light heater.

AIR FOR COMBUSTION AND VENTILATION

A WARNING: This heater shall not be installed in a room or space unless the required volume of indoor combustion air is provided by the method described in the National Fuel Gas Code, ANSI Z223.1/NFPA 54, the International Fuel Gas Code, or applicable local codes. Read the following instructions to insure proper fresh air for this and other fuel-burning appliances in your home.

Today's homes are built more energy efficient than ever. New materials, increased insulation and new construction methods help reduce heat loss in homes. Home owners weather strip and caulk around windows and doors to keep the cold air out and the warm air in. During heating months, home owners want their homes as airtight as possible.

While it is good to make your home energy efficient, your home needs to breathe. Fresh air must enter your home. All fuel-burning appliances need fresh air for proper combustion and ventilation.

Exhaust fans, fireplaces, clothes dryers and fuel burning appliances draw air from the house to operate. You must provide adequate fresh air for these appliances. This will insure proper venting of vented fuel-burning appliances.

PROVIDING ADEQUATE VENTILATION

The following are excerpts from National Fuel Gas Code, ANSI Z223.1/NFPA 54, Air for Combustion and Ventilation.

All spaces in homes fall into one of the three following ventilation classifications:

- 1. Unusually Tight Construction
- 2. Unconfined Space
- 3. Confined Space

The information on pages 6 through 8 will help you classify your space and provide adequate ventilation.

Unusually Tight Construction

The air that leaks around doors and windows may provide enough fresh air for combustion and ventilation. However, in buildings of unusually tight construction, you must provide additional fresh air.

Unusually tight construction is defined as construction where:

- walls and ceilings exposed to the outside atmosphere have a continuous water vapor retarder with a rating of one perm (6 x 10-11 kg per pa-sec-m²) or less with openings gasketed or sealed and
- b. weather stripping has been added on openable windows and doors and
- c. caulking or sealants are applied to areas such as joints around window and door frames, between sole plates and floors, between wall-ceiling joints, between wall panels, at penetrations for plumbing, electrical and gas lines and at other openings.

If your home meets all of the three criteria above, you must provide additional fresh air. See <u>Ventilation Air From Outdoors</u>, page 8. If your home does not meet all of the three criteria above, proceed to <u>Determining Fresh-Air Flow For Heater Location</u>, page 7.

Confined and Unconfined Space

The National Fuel Gas Code, ANSI Z223.1/ NFPA 54 defines a confined space as a space whose volume is less than 50 cubic feet per 1,000 Btu per hour (4.8 m³ per kw) of the aggregate input rating of all appliances installed in that space and an unconfined space as a space whose volume is not less than 50 cubic feet per 1,000 Btu per hour (4.8 m³ per kw) of the aggregate input rating of all appliances installed in that space. Rooms communicating directly with the space in which the appliances are installed*, through openings not furnished with doors, are considered a part of the unconfined space.

* Adjoining rooms are communicating only if there are doorless passageways or ventilation grills between them.

DETERMINING FRESH-AIR FLOW FOR HEATER LOCATION

Determining if You Have a Confined or Unconfined Space

Use this work sheet to determine if you have a confined or unconfined space.

Space: Includes the room in which you will install heater plus any adjoining rooms with doorless passageways or ventilation grills between the rooms.

AIR FOR COMBUSTION AND VENTILATION

Continued

- Determine the volume of the space (length x width x height).
 - Length x Width x Height = ____cu. ft. (volume of space)

Example: Space size 20 ft. (length) x 16 ft. (width) x 8 ft. (ceiling height) = 2560 cu. ft. (volume of space)

If additional ventilation to adjoining room is supplied with grills or openings, add the volume of these rooms to the total volume of the space.

2. Multiply the space volume by 20 to determine the maximum Btu/Hr the space can support.

____ (volume of space) x 20 = (Maximum Btu/Hr the space can support)

Example: 2560 cu. ft. (volume of space) x 20 = 51,200 (maximum Btu/Hr the space can support)

3. Add the Btu/Hr of all fuel burning appliances in the space.

Vent-free fireplace		Btu/Hr
Gas water heater*		Btu/Hr
Gas furnace		Btu/Hr
Vented gas heater		Btu/Hr
Gas fireplace logs		Btu/Hr
Other gas appliances*	+	Btu/Hr
Total =	=	Btu/Hr

* Do not include direct-vent gas appliances. Direct-vent draws combustion air from the outdoors and vents to the outdoors.

Example:

Gas water heater		40,000	_Btı	ı/Hr
Vent-free fireplace	+	33,000	Btu	ı/Hr
Total		73,000	=	Btu
Hr			-	

Compare the maximum Btu/Hr the space can support with the actual amount of Btu/Hr used.

____ Btu/Hr (maximum the space can support)

_____Btu/Hr (actual amount of Btu/Hr used)
Example: 51,200 Btu/Hr (maximum the space can support)

73,000 Btu/Hr (actual amount of Btu/Hr used)

40 000

The space in the above example is a confined space because the actual Btu/Hr used is more than the maximum Btu/Hr the space can support. You must provide additional fresh air. Your options are as follows:

A. Rework worksheet, adding the space of an adjoining room. If the extra space provides an unconfined space, remove door to adjoining room or add ventilation grills between rooms. See <u>Ventilation Air From Inside</u> <u>Building</u>, page 8.

- B. Vent room directly to the outdoors. See <u>Ventilation Air From Outdoors</u>, page 8.
- C. Install a lower Btu/Hr fireplace, if lower Btu/ Hr size makes room unconfined

If the actual Btu/Hr used is less than the maximum Btu/Hr the space can support, the space is an unconfined space. You will need no additional fresh air ventilation

A WARNING: If the area in which the heater may be operated does not meet the required volume for indoor combustion air, combustion and ventilation air shall be provided by one of the methods described in the National Fuel Gas Code, ANSI Z223.1/NFPA 54, the International Fuel Gas Code, or applicable local codes.

VENTILATION AIR

Ventilation Air From Inside Building

This fresh air would come from an adjoining unconfined space. When ventilating to an adjoining unconfined space, you must provide two permanent openings: one within 12" of the ceiling and one within 12" of the floor on the wall connecting the two spaces (see options 1 and 2, Figure 2). You can also remove door into adjoining room (see option 3, Figure 2). Follow the National Fuel Gas Code, ANSI Z223.1/NFPA 54, Air for Combustion and Ventilation for required size of ventilation grills or ducts.

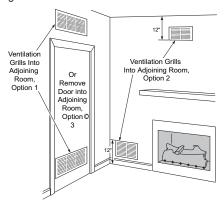

Figure 2 - Ventilation Air from Inside Building

AIR FOR COMBUSTION AND VENTILATION

Continued

Ventilation Air From Outdoors

Provide extra fresh air by using ventilation grills or ducts. You must provide two permanent openings: one within 12" of the ceiling and one within 12" of the floor. Connect these items directly to the outdoors or spaces open to the outdoors. These spaces include attics and crawl spaces. Follow the *National Fuel Gas Code, ANSI Z223.1/NFPA 54, Air for Combustion and Ventilation* for required size of ventilation grills or ducts.

IMPORTANT: Do not provide openings for inlet or outlet air into attic if attic has a thermostat-controlled power vent. Heated air entering the attic will activate the power vent.

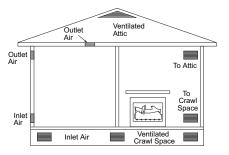

Figure 3 - Ventilation Air from Outdoors

INSTALLATION

NOTICE: This heater is intended for use as supplemental heat. Use this heater along with your primary heating system. Do not install this heater as your primary heat source. If you have a central heating system, you may run system's circulating blower while using heater. This will help circulate the heat throughout the house. In the event of a power outage, you can use this heater as your primary heat source.

WARNING: A qualified service person must install heater. Follow all local codes.

A CAUTION: This heater creates warm air currents. These currents move heat to wall surfaces next to heater. Installing heater next to vinyl or cloth wall coverings or operating heater where impurities (such as, but not limited to, tobacco smoke, aromatic candles, cleaning fluids, oil or kerosene lamps, etc.) in the air exist, may discolor walls or cause odors.

NOTICE: State or local codes may only allow operation of this appliance in a vented configuration. Check your state or local codes.

WARNING: If optional remote control is used, make sure the selector switch is in the OFF position before installing heater.

WARNING: Before installing in a solid fuel burning fireplace, the chimney flue and firebox must be cleaned of soot, creosote, ashes and loose paint by a qualified chimney cleaner. Creosote will ignite if highly heated. A dirty chimney flue and firebox may create and distribute soot within the house. Inspect chimney flue for damage. If damaged, repair flue before operating heater.

WARNING: Seal any fresh air vents or ash clean-out doors located on floor or wall of fireplace. If not, drafting may cause pilot outage or sooting. Use a heat-resistant sealant. Do not seal chimney flue damper.

Continued

A WARNING: Never install the heater

- in a bedroom or bathroom unless installed as a vented appliance, see page 11
- · in a recreational vehicle
- where curtains, furniture, clothing or other flammable objects are less than 36" from front and 42" from top of heater; for side clearances see Figure 4
- in high traffic areas
- in windy or drafty areas

IMPORTANT: Vent-free heaters add moisture to the air. Although this is beneficial, installing heater in rooms without enough ventilation air may cause mildew to form from too much moisture. See <u>Air for Combustion and Ventilation</u>, page 6.

CHECK GAS TYPE

Use the correct gas type (natural or propane/ LP) for your unit. If your gas supply is not correct, do not install log set. Call dealer where you bought log set for proper type fireplace.

WARNING: This appliance is equipped for either natural gas or propane/LP gas but not both. Gas type is indicated on the rating plate. Field conversion is not permitted.

INSTALLATION AND CLEARANCES FOR VENT-FREE OPERATION

MINIMUM FIREPLACE CLEARANCE TO COMBUSTIBLE MATERIALS Side Wall 16", Ceiling 42", Front 36"

L	LOG SIZING REQUIREMENTS				
	Minimum Firebox				
Log Size	Height	Depth	Front Width	Rear * Width	
18"	17"	13.5"	24"	20.5"	
24"	17"	13.5"	28"	20.5"	

^{*} Measured at 13.5" depth.

WARNING: Maintain the minimum clearances. If you can, provide greater clearances from floor, ceiling and adjoining wall.

Carefully follow these instructions. This will ensure safe installation into a masonry, UL127-listed manufactured fireplace or listed vent-free firebox

Minimum Clearances For Side Combustible Material, Side Wall and Ceiling

- Clearances from the side of the fireplace cabinet to any combustible material and wall should follow diagram in Figure 4.

 Frample: The free of a mental backsholf.
 - Example: The face of a mantel, bookshelf, etc. is made of combustible material and protrudes 3 ½" from the wall. This combustible material must be 4" from the side of the fireplace cabinet (see Figure 4).
 - Note: When installing your gas logs into a manufactured firebox, follow firebox manufacturer's instructions for minimum clearances to combustible materials.
- B. Clearances from the top of the fireplace opening to the ceiling should not be less than 42".

NOTICE: Manual control heaters may be used as a vented product. If so, you must always run heater with chimney flue damper open. If running heater with damper open, noncombustible material above fireplace opening is not needed. Go to <u>Installing Damper Clamp Accessory for Vented Operation</u>, page 11.

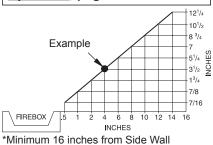

Figure 4 - Minimum Clearance for Combustible to Wall

Continued

Minimum Noncombustible Material Clearances If Not Using Mantel

Note: If using a mantel proceed to <u>If Using Mantel</u>. If not using a mantel, follow the information on this page.

You must have noncombustible material(s) above the fireplace opening. Noncombustible materials (such as slate, marble, tile, etc.) must be at least 1/2 inch thick. With sheet metal, you must have noncombustible material behind it. Noncombustible material must extend at least 8" up (for all models). If noncombustible material is less than 12", you must install the fireplace hood accessory (for all models). See Figure 5 for minimum clearances.

Noncombustible Material Distance (A)	Requirements for Safe Installation
12" or more	Noncombustible material okay.
Between 8" and 12"	Install fireplace hood accessory (GA6050 or GA6053 see <u>Accessories</u> , page 34).
Less than 8"	Noncombustible material must be extended to at least 8". See <u>Between</u> <u>8" and 12"</u> , above. If you cannot extend material, you must operate heater with flue damper open.

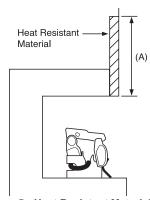

Figure 5 - Heat Resistant Material (Slate, Marble, Tile, etc.) Above Fireplace

If Using Mantel

You must have noncombustible material(s) above the fireplace opening. Noncombustible materials (such as slate, marble, tile, etc.) must be at least 1/2" thick. With sheet metal, you must have noncombustible material behind it. Noncombustible material must extend at least 8 inches up (for all models). If noncombustible material is less than 12", you must install the fireplace hood accessory (24" Models Only). Even if noncombustible material is more than 12", you may need the hood accessory to deflect heat away from your mantel shelf. See Figure 5, and Figures 6 and 7 (page 11) for minimum clearances.

IMPORTANT: If you cannot meet these minimum clearances, you must operate heater with chimney flue damper open. Go to Installing Damper Clamp Accessory for Vented Operation, page 11.

MANTEL CLEARANCES

In addition to meeting noncombustible material clearances, you must also meet required clearances between fireplace opening and mantel shelf. If you do not meet the clearances listed below, you will need a hood.

Determining Minimum Mantel Clearance

If you meet minimum clearance between mantel shelf and top of fireplace opening, a hood is not required (see Figure 6).

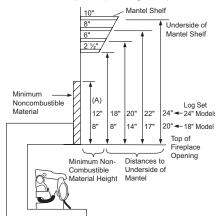

Figure 6 - Minimum Mantel Clearances Without Using Hood

Continued

Determining Minimum Mantel Clearance When Using a Hood

If minimum clearances in Figure 6, page 10, are not met, you must have a hood. When using a hood there are still certain minimum mantel clearances required. Follow minimum clearances shown in Figure 7 when using hood.

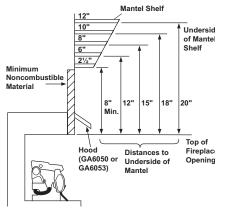

Figure 7 - Minimum Mantel Clearances When Using Hood

NOTICE: Surface temperatures of adjacent walls and mantels become hot during operation. Walls and mantels above the firebox may become hot to the touch. If installed properly, these temperatures meet the requirement of the national product standard. Follow all minimum clearances shown in this manual.

NOTICE: If your installation does not meet the minimum clearances shown, you must do one of the following:

- operate the logs only with the flue damper open
- raise the mantel to an acceptable height
- · remove the mantel

FLOOR CLEARANCES

- A. If installing appliance on the floor level, you must maintain the minimum distance of 14" to combustibles (see Figure 8).
- B. If combustible materials are less than 14" to the fireplace, you must install appliance at least 5" above the combustible flooring (see Figure 9).

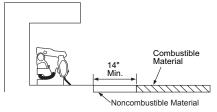

Figure 8 - Minimum Fireplace Clearances
If Installed at Floor Level

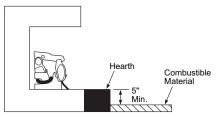

Figure 9 - Minimum Fireplace Clearances
Above Combustible Flooring

INSTALLING DAMPER CLAMP ACCESSORY FOR VENTED OPERATION

Note: When used as a vented heater, appliance must be installed only in a solid-fuel burning fireplace with a working flue and constructed of noncombustible material

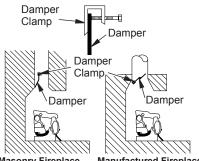

For Massachusetts Residents Only: Installation of this vented gas log set in the Commonwealth of Massachusetts requires the damper be permanently removed or welded in the fully open position.

If your heater is a manually-controlled model, you may use this heater as a vented product. There are three reasons for operating your heater in the vented mode.

- The fireplace does not meet the clearance to combustibles requirements for vent-free operation.
- State or local codes do not permit ventfree operation.
- 3. You prefer vented operation.

Continued

If reasons number 1 or 2 apply to you, you must permanently open chimney flue damper. You must install the damper clamp accessory (to order, see <u>Accessories</u>, page 34). This will insure vented operation (see Figure 10). The damper clamp will keep damper open. Installation instructions are included with clamp accessory.

Masonry Fireplace Manufactured Fireplace
Figure 10 - Attaching Damper Clamp

See chart for minimum permanent flue opening you must provide. Attach damper clamp so the minimum permanent flue opening will be maintained at all times.

Area of Various Standard Round Flues		
Diameter	Area	
5"	20 sq. in.	
6"	29 sq. in.	
7"	39 sq. in.	
8"	51 sq. in.	

Chimney Height	Minimum Permanent Flue Opening	
6' to 15'	39 sq. in.	
15' to 30'	29 sq. in.	

INSTALLING HEATER BASE ASSEMBLY

WARNING: You must secure this heater to fireplace floor. If not, heater will move when you adjust controls. Moving heater may cause a gas leak or log misplacement.

WARNING: If installing in a sunken fireplace, special care is needed. You must raise the fireplace floor to allow access to heater control panel. This will insure adequate air flow and guard against sooting and controls being damaged. Raise fireplace floor with noncombustible material. Make sure material is secure.

A CAUTION: Do not pick up heater base assembly by burners. This could damage heater. Only handle base assembly by grates.

IMPORTANT: Make sure the heater burners are level. If heater is not level, heater will not work properly.

Installation Items Needed

- hardware package (provided with heater)
- approved flexible gas hose and fittings (if allowed by local codes)
- sealant (resistant to propane/LP gas, not provided)
- electric drill with 3/16" drill bit (metal or masonry as applicable)
- · flathead screwdriver
- pipe wrench
- Connect approved flexible gas hose to gas control fitting in heater (see Figure 11, page 13).
 - *IMPORTANT:* Hold gas fitting with wrench when connecting flexible gas hose.
- Locate two masonry screws in hardware package.
- 3. Place heater base in fireplace.
- 4. Place logs in their proper position on heater base (see *Installing Logs*, page 16).
- Center heater base and logs front-to-back and side-to-side in fireplace.
- Carefully remove logs without moving heater base.
- Mark screw locations through one hole on each side of the mounting bracket (see Figure 12, page13). If installing in a brickbottom fireplace, mark screw locations in mortar joint of bricks.

Continued

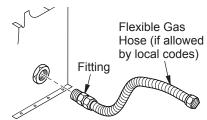

Figure 11 - Attaching Flexible Gas Hose to Heater

- Remove heater base from fireplace. If installing optional control accessories, do so at this time. Follow all directions provided with accessory.
- Drill holes at marked locations using 3/16" drill bit.
- Attach base assembly to fireplace floor using two masonry screws (in hardware package).

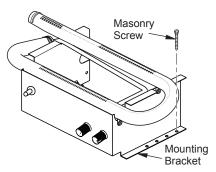

Figure 12 - Attaching Base to Fireplace
Floor

CONNECTING TO GAS SUPPLY

WARNING: This appliance requires a 3/8" NPT (National Pipe Thread) inlet connection to the pressure regulator.

WARNING: A qualified service person must connect heater to gas supply. Follow all local codes.

A CAUTION: Never connect propane/LP fireplace directly to the propane/LP supply. This heater requires an external regulator (not supplied). Install the external regulator between the heater and propane/LP supply.

Installation Items Needed

Before installing heater, make sure you have the items listed below.

- external regulator (supplied by installer)
- piping (check local codes)
- sealant (resistant to propane/LP gas)
- · equipment shutoff valve *
- · test gauge connection *
- sediment trap
- tee joint
- · pipe wrench
- * A equipment shutoff valve with 1/8" NPT tap is an acceptable alternative to test gauge connection. Purchase the optional equipment shutoff valve from your dealer.

For propane/LP units, the installer must supply an external regulator. The external regulator will reduce incoming gas pressure. You must reduce incoming gas pressure to between 11" and 14" of water. If you do not reduce incoming gas pressure, heater regulator damage could occur. Install external regulator with the vent pointing down as shown in Figure 13. Pointing the vent down protects it from freezing rain or sleet.

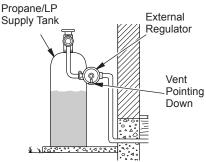

Figure 13 - External Regulator With Vent Pointing Down

Continued

A WARNING: Never connect natural gas fireplace to private (non-utility) gas wells. This gas is commonly known as wellhead gas.

A CAUTION: Use only new, black iron or steel pipe. Internally-tinned copper tubing may be used in certain areas. Check your local codes. Use pipe of 1/2" diameter or greater to allow proper gas volume to heater. If pipe is too small, undue loss of volume will occur.

Installation must include an equipment shutoff valve, union and plugged 1/8" NPT tap. Locate NPT tap within reach for test gauge hook up. NPT tap must be upstream from heater (see Figure 14).

IMPORTANT: Install equipment shutoff valve in an accessible location. The equipment shutoff valve is for turning on or shutting off the gas to the appliance.

Check your building codes for any special requirements for locating equipment shutoff valve to fireplaces.

Apply pipe joint sealant lightly to male NPT threads. This will prevent excess sealant from going into pipe. Excess sealant in pipe could result in clogged heater valves.

WARNING: Use pipe joint sealant that is resistant to liquid petroleum (LP) gas.

We recommend that you install a sediment trap in supply line as shown in Figure 14. Locate sediment trap where it is within reach for cleaning. Install in piping system between fuel supply and heater. Locate sediment trap where trapped matter is not likely to freeze. A sediment trap traps moisture and contaminants. This keeps them from going into heater controls. If sediment trap is not installed or is installed wrong, heater may not run properly.

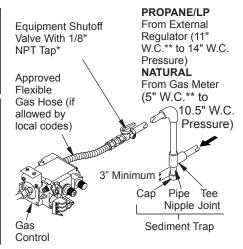

Figure 14 - Gas Connection

- * Purchase the optional equipment shutoff valve from your dealer.
- ** Minimum inlet pressure for purpose of input adjustment.

CAUTION: Avoid damage to gas control. Hold gas fitting with wrench when connecting it to gas piping and/or fittings.

CHECKING GAS CONNECTIONS

WARNING: Test all gas piping and connections, internal and external to unit, for leaks after installing or servicing. Correct all leaks at once.

WARNING: Never use an open flame to check for a leak. Apply a noncorrosive leak detection fluid to all joints. Bubbles forming show a leak. Correct all leaks at once.

Continued

A CAUTION: Make sure external regulator has been installed between propane/LP supply and heater. See guidelines under <u>Connecting to Gas Supply</u>, page 13.

PRESSURE TESTING GAS SUPPLY PIPING SYSTEM

Test Pressures In Excess Of 1/2 PSIG (3.5 kPa)

- Disconnect appliance with its appliance main gas valve (control valve) and equipment shutoff valve from gas supply piping system. Pressures in excess of 1/2 psig will damage heater regulator.
- Cap off open end of gas pipe where equipment shutoff valve was connected.
- Pressurize supply piping system by either opening propane/LP supply tank valve for propane/LP gas or opening main gas valve located on or near gas meter for natural gas or using compressed air.
- Check all joints of gas supply piping system. Apply noncorrosive leak detection fluid to all joints. Bubbles forming show a leak.
- 5. Correct all leaks at once.
- Reconnect heater and equipment shutoff valve to gas supply. Check reconnected fittings for leaks.

Test Pressures Equal To or Less Than 1/2 PSIG (3.5 kPa)

- 1. Close equipment shutoff valve (see Figure 15).
- Pressurize supply piping system by either opening propane/LP supply tank valve for propane/LP gas or opening main gas valve located on or near gas meter for natural gas or using compressed air.
- Check all joints from gas meter to equipment shutoff valve for natural gas or propane/ LP supply to equipment shutoff valve for propane/LP (see Figures 16 and 17). Apply noncorrosive leak detection fluid to all joints. Bubbles forming show a leak.
- 4. Correct all leaks at once.

PRESSURE TESTING HEATER GAS CONNECTIONS

- Open equipment shutoff valve (see Figure 17).
- Open main gas valve located on or near gas meter for natural gas or open propane/LP supply tank valve.

- Make sure control knob of heater is in the OFF position.
- Check all joints from equipment shutoff valve to gas control (see Figures 16 and 17). Apply noncorrosive leak detection fluid to all joints. Bubbles forming show a leak.
- 5. Correct all leaks at once.
- 6. Light heater (see *Operation*, page 20). Check all other internal joints for leaks.
- 7. Turn off heater (see <u>To Turn Off Gas to Appliance</u>, page 21).

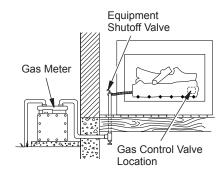

Figure 17 - Checking Gas Joints (Natural Gas Only)

Continued

INSTALLING LOGS

WARNING: Failure to position the parts in accordance with these diagrams or failure to use only parts specifically approved with this heater may result in property damage or personal injury.

A CAUTION: After installation and periodically thereafter, check to ensure that no flame comes in contact with any log. With the heater set to HI, check to see if flames contact any log. If so, reposition logs according to the log installation instructions in this manual. Flames contacting logs will create soot.

LVD18-GO AND LVD24-GO

It is very important to install these logs exactly as instructed. Do not modify logs. Only use logs supplied with heater.

- Place rear log onto base. Holes in bottom of log must seat over pins on base as shown in Figure 18.
- Place center log onto base. Holes in bottom of log must seat over pins on base as shown in Figure 18.

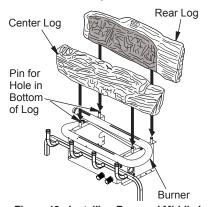

Figure 18 - Installing Rear and Middle Logs

Place front log onto grate as shown in Figure 19. Front log has cut outs for the fingers of the grate to fit into.

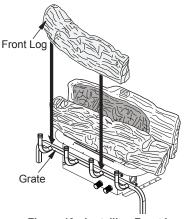

Figure 19 - Installing Front Log

- Place left crossover log as shown in Figure 20, page 17. Match square peg on top of center log with square hole on bottom of left crossover log. Match pin on top of front log with round hole on bottom of left crossover log.
 - Place center crossover log as shown in Figure 20, page 17. Match square peg on top of rear log with square hole on bottom of center crossover log. Match pin on top of center log with round hole on bottom of center crossover log.
 - Place left front crossover log as shown in Figure 20, page 17. Log should rest on the grate and fit into recess area on the center log.

Continued

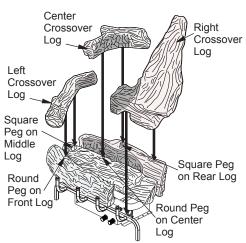

Figure 20 - Installing Left, Center and Right Crossover Logs

- Place rear log (#1) onto base. Holes in bottom of log must seat over pins on base as shown in Figure 21.
- Place middle log (#2) onto base. Holes in bottom of log must seat over pins on base as shown in Figure 21.

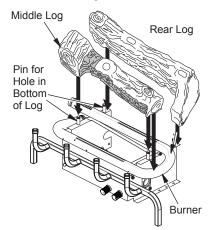

Figure 21 - Installing Rear and Middle Logs

3. Place front log (#3) onto grate as shown in Figure 22.

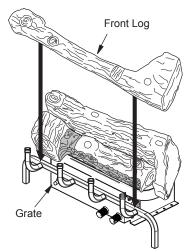

Figure 22 - Installing Front Log

- Place left top log (#4) as shown in Figure 23. Match square peg on top of rear log (#1) with square hole on bottom of left top log (#4). Match round peg on top of middle log (#2) with round hole on bottom of left top log (#4).
- Place right top log (#5) as shown in Figure 23. Match square peg on top of rear log (#1) with square hole on bottom of right top log (#5). Match round peg on top of front log (#3) with round hole on bottom of right top log (#5).

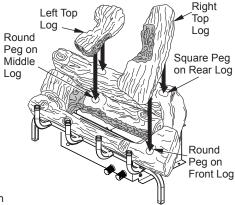

Figure 23 - Installing Left and Right Logs

Continued

LVD18-CH AND LVD24-CH

It is very important to install these logs exactly as instructed. Do not modify logs. Only use logs supplied with heater.

 Place the rear log onto base. Notches in the back of the log must seat over the pins on base as shown in Figure 24. Make sure the rear log is pushed back as far as it will go.

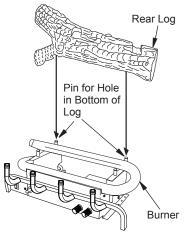

Figure 24 - Installing Rear Log

Place the middle log on base. Holes in bottom of log must seat over pins on base as shown in Figure 25.

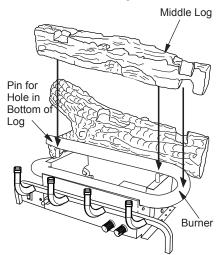

Figure 25 - Installing Middle Log

3. Place the front log onto grate as shown in Figure 26.

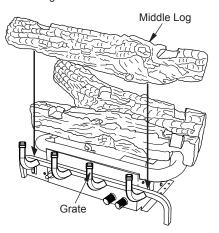

Figure 26 - Installing Front Log

4. Place the top right log onto the rear, middle and front logs as shown in Figure 27. The rear, middle and front logs has notches for the top right log to set into. You may have to move the front log from left to right to get it to line up with the top right log.

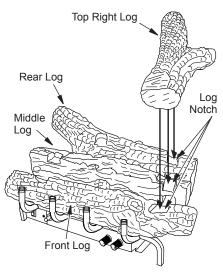

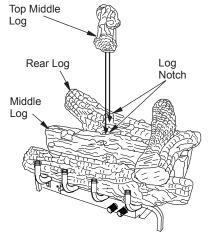

Figure 27 - Installing Top Right Log

18

Continued

- 5. Place the top middle log onto the rear & middle logs as shown in Figure 28. Make sure to match up the shape on the bottom of the top middle log with the notches in the rear and middle logs.
- 7. Final assembly is shown in Figure 30.

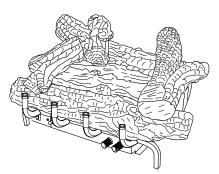

Figure 30 - Final assembly

Figure 28 - Installing Middle Log

6. Place the top left log onto the middle and front logs as shown in Figure 29. Make sure to match up the shape on the bottom of the top left log with the notches in the middle and front logs.

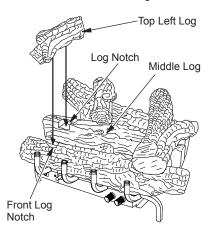

Figure 29 - Installing Top Left Log

OPERATION

FOR YOUR SAFETY READ BEFORE LIGHTING

LIGHTING INSTRUCTIONS

WARNING: If you do not follow these instructions exactly, a fire or explosion may result causing property damage, personal injury or loss of life.

- A. This appliance has a pilot which must be lighted by hand. When lighting the pilot, follow these instructions exactly.
- B. BEFORE LIGHTING smell all around the appliance area for gas. Be sure to smell next to the floor because some gas is heavier than air and will settle on the floor.

WHAT TO DO IF YOU SMELL GAS

- Do not try to light any appliance.
- Do not touch any electric switch; do not use any phone in your building.
- Immediately call your gas supplier from a neighbor's phone. Follow the gas supplier's instructions.
- If you cannot reach your gas supplier, call the fire department.
- C. Use only your hand to push in or turn the gas control knob. Never use tools. If the knob will not push in or turn by hand, don't try to repair it, call a qualified service technician or gas supplier. Force or attempted repair may result in a fire or explosion.
- D. Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been under water.

A WARNING:

- If fireplace has glass doors, never operate this heater with glass doors closed. If you operate heater with doors closed, heat buildup inside fireplace will cause glass to burst. Make sure there are no obstructions across opening of fireplace.
- You must operate this heater with a fireplace screen in place.
 Make sure fireplace screen is closed before running heater.

NOTICE: During initial operation of new heater, burning logs will give off a paper-burning smell. Orange flame will also be present. Open damper or window to vent smell. This will only last a few hours.

Note: Home owners generally prefer to operate their heater with the chimney damper closed. This will put all the heat into the room. However, there may be times you will desire the full flames of the HI heat setting but will find the heat output excessive. You can open the chimney damper (if you have one) fully or partially to release some of the heat.

WARNING: Damper handle will be hot if heater has been running.

- STOP! Read the safety information in the left column.
- Make sure equipment shutoff valve is fully open.
- 3. If equipped with a remote control, set selector switch in the OFF position.

WARNING: Burners will come on automatically within one minute when the selector switch is in the ON position after the pilot is lit.

OPERATION

Continued

- 4. Press in and turn control knob clockwise to the OFF position (see Figure 31).
- Wait five (5) minutes to clear out any gas.
 Then smell for gas, including near the floor. If you smell gas, STOP! Follow "B" in the safety information, page 18. If you don't smell gas, go to the next step.
- Press in and turn control knob counterclockwise to the PILOT position. Press in control knob for five (5) seconds (see Figure 31).

Note: You may be running this heater for the first time after hooking up to gas supply. If so, the control knob may need to be pressed in for 30 seconds or more. This will allow air to bleed from the gas system.

 With control knob pressed in, press and release ignitor button. This will light pilot. The pilot is attached to the front burner. If needed, keep pressing ignitor button until pilot lights.

Note: If pilot does not stay lit, contact a qualified service person or gas supplier for repairs. Until repairs are made, light pilot with match. To light pilot with match, see Manual Lighting Procedure.

8. Keep control knob pressed in for 30 sec-

Flame Adjustment Knob Control Knob

Ignitor Button

Figure 31 - Control Knob and Ignitor Button Location (Shown as Supplied, No Control Options)

onds after lighting pilot. After 30 seconds, release control knob

 If control knob does not pop out when released, contact a qualified service person or gas supplier for repairs.

Note: If pilot goes out, repeat steps 4 through 8.

- 9. Slightly push in and turn control knob counterclockwise to the ON position.
- Wait one minute and switch selector switch, if optional remote control is used, to the ON position to light burners. Note: AUTO is only functional when using GWMT1 or GWMS2 optional accessories.

- 11. Set flame adjustment knob to any level between HI and LO.
- 12. To leave pilot lit and shut off burners only: turn control knob clockwise to the PILOT position, or use remote control manual OFF button, or set selector switch in the OFF position.

CAUTION: Do not try to adjust heating levels by using the equipment shutoff valve.

WARNING: If optional remote control is used, make sure the selector switch is in the OFF position when you are away from home for long periods of time. Heater will come on automatically with selector switch in the ON position.

TO TURN OFF GAS TO APPLIANCE

- If Using Optional Hand-Held Remote: Set selector switch in the OFF position to prevent draining battery.
- 3. Close equipment shutoff valve (see Figure 15, page 15).

MANUAL LIGHTING PROCEDURE

- Follow steps 1 through 6 under <u>Lighting</u> <u>Instructions</u>, page 20.
- Depress control knob and light pilot with match.
- Keep control knob pressed in for 30 seconds after lighting pilot. After 30 seconds, release control knob. Now follow steps 9 through 11 under <u>Lighting Instructions</u>, page 20.

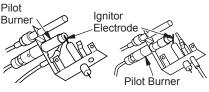

Figure 32 - Pilot (Propane/LP)

Figure 33 - Pilot (Natural)

INSPECTING BURNERS

Check pilot flame pattern and burner flame patterns often.

PILOT FLAME PATTERN

Figure 34 shows a correct pilot flame pattern. Figure 35 shows an incorrect pilot flame pattern. The incorrect pilot flame is not touching the thermocouple. This will cause the thermocouple to cool. When the thermocouple cools, the heater will shut down.

If pilot flame pattern is incorrect, as shown in Figure 35

- turn heater off (see <u>To Turn Off Gas to Appliance</u>, page 21)
- see *Troubleshooting*, page 24

Note: The pilot flame on natural gas units will have a slight curve, but flame should be blue and have no yellow or orange color.

BURNER PRIMARY AIR HOLES

Air is drawn into the burner through the holes in the fitting at the burner entrance. These holes may become blocked with dust or lint. Periodically inspect these holes for any blockage and clean if needed. Blocked air holes will create soot.

Figure 34 - Correct Pilot Flame Pattern (Your pilot may vary from pilot shown)

Figure 35 - Incorrect Pilot Flame Pattern (Your pilot may vary from pilots shown)

MAIN BURNER

Periodically inspect all burner flame holes with the heater running. All slotted burner flame holes should be open with yellow flame present. All round burner flame holes should be open with a small blue flame present. Some burner flame holes may become blocked by debris or rust, with no flame present. If so, turn off heater and let cool. Remove blockage. Blocked burner flame holes will create soot.

CLEANING AND MAINTENANCE

A WARNING: Turn off heater and let cool before cleaning.

CAUTION: You must keep control areas, burners and circulating air passageways of heater clean. Inspect these areas of heater before each use. Have heater inspected yearly by a qualified service person. Heater may need more frequent cleaning due to excessive lint from carpeting, pet hair, bedding material, etc.

WARNING: Failure to keep the primary air opening(s) of the burner(s) clean may result in sooting and property damage.

BURNER ORIFICE HOLDER AND PILOT AIR INLET HOLE

The primary air inlet holes allow the proper amount of air to mix with the gas. This provides a clean burning flame. Keep these holes clear of dust, dirt, lint and pet hair. Clean these air inlet holes prior to each heating season. Blocked air holes will create soot. We recommend that you clean the unit every three months during operation and have heater inspected yearly by a qualified service person.

We also recommend that you keep the burner tube and pilot assembly clean and free of dust and dirt. To clean these parts we recommend using compressed air no greater than 30 PSI. Your local computer store, hardware store or home center may carry compressed air in a can. If using compressed air in a can. If using compressed air in a can. If you don't follow directions on the can, you could damage the pilot assembly.

CLEANING AND MAINTENANCE

Continued

- 1. Shut off the unit, including the pilot. Allow the unit to cool for at least thirty minutes.
- Inspect burner, pilot and primary air inlet holes on Orifice holder for dust and dirt (see Figures 36 and 37).
- 3. Blow air through the ports/slots and holes in the burner.
- Check the Orifice holder located at the end of the burner tube again. Remove any large particles of dust, dirt, lint or pet hair with a soft cloth or vacuum cleaner nozzle.
- Blow air into the primary air holes on the Orifice holder.
- In case any large clumps of dust have now been pushed into the burner repeat steps 3 and 4.

Clean the pilot assembly also. A yellow tip on the pilot flame indicates dust and dirt in the pilot assembly. There is a small pilot air inlet hole about two inches from where the pilot flame comes out of the pilot assembly (see Figure 37). With the unit off, lightly blow air through the air inlet hole. You may blow through a drinking straw if compressed air is not available.

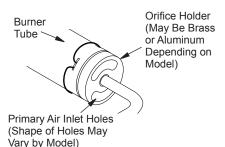

Figure 36 - Orifice Holder On Outlet Burner Tube

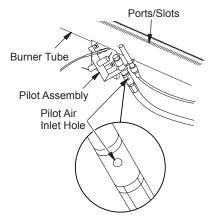

Figure 37 - Pilot Inlet Air Hole

LOGS

- If you remove logs for cleaning, refer to Installing Logs, page 16, to properly replace logs.
- Replace log(s) if broken or chipped (dimesized or larger).

MAIN BURNER

Periodically inspect all burner flame holes with the heater running. All slotted burner flame holes should be open with yellow flame present. All round burner flame holes should be open with a small blue flame present. Some burner flame holes may become blocked by debris or rust, with no flame present. If so, turn off heater and let cool. Remove blockage. Blocked burner flame holes will create soot.

WARNING: Turn off heater and let cool before servicing. Only a qualified service person should service and repair heater.

A CAUTION: Never use a wire, needle or similar object to clean ODS/pilot. This can damage ODS/pilot unit.

Note: All troubleshooting items are listed in order of operation.

OBSERVED PROBLEM	POSSIBLE CAUSE	REMEDY
When ignitor button is pressed, there is no spark	Ignitor electrode not con- nected to ignitor cable	Reconnect ignitor cable
at ODS/pilot	Ignitor cable pinched or wet	Free ignitor cable if pinched by any metal or tubing. Keep ignitor cable dry
	3. Piezo ignitor nut is loose	Tighten nut holding piezo ignitor to base panel of log set. Nut is located behind base panel
	4. Broken ignitor cable	Replace ignitor cable
	Bad piezo ignitor	Replace piezo ignitor
	Ignitor electrode positioned wrong	6. Replace pilot assembly
	7. Ignitor electrode broken	7. Replace pilot assembly
When ignitor button is pressed, there is spark at ODS/pilot but no ignition	Gas supply turned off or equipment shutoff valve closed	Turn on gas supply or open equipment shutoff valve
OB S, pilot but no igrillion	Control knob not in PILOT position	Turn control knob to PILOT position
	3. Control knob not pressed in while in PILOT position	3. Press in control knob while in PILOT position
	Air in gas lines when installed	 Continue holding down control knob. Repeat ignit- ing operation until air is removed
	Depleted gas supply (pro- pane/LP only)	5. Contact local propane/LP gas company
	6. ODS/pilot is clogged	6. Clean ODS/pilot (see <u>Cleaning and Maintenance</u> , page 22) or replace ODS/pilot assembly
	7. Gas regulator setting is not correct	Replace gas regulator

OBSERVED PROBLEM	POSSIBLE CAUSE	REMEDY
Slight smoke or odor during initial operation	1. Not enough air	Check burner for dirt and debris. If found, clean burner (see <u>Cleaning and</u> <u>Maintenance</u> , page 22)
	Gas regulator defective Residues from manufacturing processes and logs curing	Replace gas control Problem will stop after a few hours of operation
Heater produces a whistling noise when burners are lit	Turning control knob to HI position when burners are cold	Turn control knob to LO position and let warm up for a minute
	2. Air in gas line	2. Operate burners until air is removed from line. Have gas line checked by local natural or propane/LP gas company
	Air passageways on heater blocked	3. Observe minimum installa- tion clearances (see pages 9 through 11)
	Dirty or partially clogged burner orifice(s)	Clean burners (see <u>Cleaning</u> <u>and Maintenance</u> , page 22) or replace burner orifice
White powder residue forming within burner box or on adjacent walls or furniture	When heated, vapors from furniture polish, wax, carpet cleaners, etc. may turn into white powder residue	Turn heater off when using furniture polish, wax, carpet cleaners or similar products
Moisture/condensation noticed on windows	Not enough combustion/ ventilation air	Refer to <u>Air for Combustion</u> <u>and Ventilation</u> requirements (page 6)
Dark residue on logs inside of their fireplace Note: Af-	Improper log placement	Properly locate logs (see Installing Logs, page 16)
ter removing all causes of residue deposits, completely	Drafts or other air currents affecting flame pattern	Eliminate source of drafts around heater
clean fireplace and appliance off residue before reusing appliance	Air holes at burner inlet blocked	Clean out air holes at burn- er inlet. Periodically repeat as needed
	Burner flame holes blocked	Remove blockage or re- place burner
Heater produces a clicking/ ticking noise just after burners are lit or shut off	Metal expanding while heating or contracting while cooling	This is normal with most heaters. If noise is exces- sive, contact qualified ser- vice person

Continued

▲ WARNING: If you smell gas

- · Shut off gas supply.
- Do not try to light any appliance.

OBSERVED PROBLEM POSSIBLE CAUSE

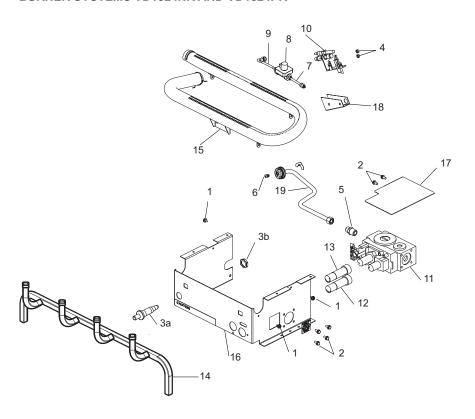

- Do not touch any electrical switch; do not use any phone in your building.
- · Immediately call your gas supplier from a neighbor's phone. Follow the gas supplier's instructions.
- · If you cannot reach your gas supplier, call the fire department.

IMPORTANT: Operating heater where impurities in air exist may create odors. Cleaning supplies, paint, paint remover, cigarette smoke, cements and glues, new carpet or textiles, etc., create fumes. These fumes may mix with combustion air and create odors. These odors will disappear over time.

RFMFDY

OBSERVED PROBLEM	PUSSIBLE CAUSE	REIVIEDT
Heater produces unwanted odors	Heater burning vapors from paint, hair spray, glues, cleaners, chemicals, new carpet, etc. (See <i>IMPOR-TANT</i> statement above)	Open window to venti- late room. Stop using odor causing products while heater is running
	2. Low fuel supply (propane/ LP only)	Refill supply tank (propane/ LP only)
	Gas leak. See Warning statement at top of page	Locate and correct all leaks (see <u>Checking Gas Connections</u> , page 14)
Heater shuts off in use (ODS operates)	Not enough fresh air is available Low line pressure ODS/pilot is partially clogged	Open window and/or door for ventilation Contact local natural or propane/LP gas company Clean ODS/pilot (see Cleaning and Maintenance, page 22)
Gas odor even when control knob is in OFF position	Gas leak. See Warning statement at top of page Control valve defective	Locate and correct all leaks (see <u>Checking Gas Connections</u> , page 14) Replace control valve
Gas odor during combustion	Foreign matter between control valve and burner Gas leak. See Warning statement at top of page	Take apart gas tubing and remove foreign matter Locate and correct all leaks (see <u>Checking Gas Connections</u> , page 14)

BURNER SYSTEMS VD1824NR AND VD1824PR

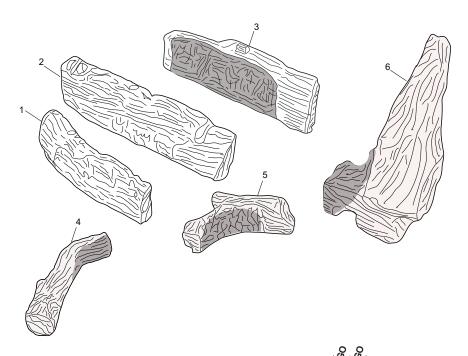

This list contains replaceable parts used in your heater. When ordering parts, follow the instructions listed under $\underbrace{Replacement\ Parts}_{}$ on page 33 of this manual.

SPECIFICATIONS

VD1824PR

- Rating: 25,000/36,000 Btu/hr
- · Gas Type: Propane/LP
- · Ignition: Piezo
- Manifold Pressure: 8.0" w.c.
- Inlet Supply Pressure (inches of water):
 Maximum 14" w.c., Minimum 11" w.c.

SERVICE HINTS

When Gas Pressure Is Too Low

- · pilot will not stay lit
- · burners will have delayed ignition
- · heater will not produce specified heat
- for propane/LP units, propane/LP gas supply may be low

You may feel your gas pressure is too low. If so, contact your local propane/LP or natural gas supplier.

VD1824NR

- Rating: 25,000/36,000 Btu/hr
- Gas Type: Natural
- · Ignition: Piezo
- · Manifold Pressure: 3.5" w.c.
- Inlet Supply Pressure (inches of water):
 Maximum 10.5" w.c., Minimum 5" w.c.

TECHNICAL SERVICE

You may have further questions about installation, operation or troubleshooting. If so, contact FMI PRODUCTS, LLC at 1-866-328-4537. When calling please have your model and serial numbers of your heater ready.

You can also visit our web site at www.fmiproducts.com.

REPLACEMENT PARTS

Note: Use only original replacement parts. This will protect your warranty coverage for parts replaced under warranty.

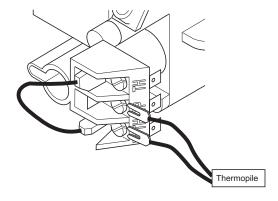

Contact authorized dealers of this product. If they can't supply original replacement part(s), call FMI PRODUCTS, LLC at 1-866-328-4537.

When calling, have ready

- your name
- · your address
- · model and serial numbers of your heater
- · how heater was malfunctioning
- type of gas used (propane/LP or natural gas)
- · purchase date

Usually, we will ask you to return the part to the factory.

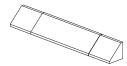

WIRING DIAGRAM

ACCESSORIES

NOTICE: All accessories may not be available for all fireplace models.

Purchase these accessories from your local dealer. If they can not supply these accessories, call FMI PRODUCTS, LLC at 1-866-328-4537 for referral information. You can also write to the address listed on the back page of this manual.

FIREPLACE HOOD

Black - GA6050 Antique Brass - GA6053

For all models. Helps deflect heat away from mantel or wall above fireplace. Fits openings 28" to 48" wide

RECEIVER AND HAND-HELD THERMOSTAT REMOTE CONTROL KIT - TRC

For all Remote-Ready Models. Allows the gas log heater to be operated in a manually or thermostatically controlled mode. You can turn the gas log heater on and off without ever leaving the comfort of your easy chair.

RECEIVER AND HAND-HELD REMOTE CONTROL KIT - MRC

For all Remote-Ready Models. Allows the gas log heater to be turned on and off by using a hand-held remote control.

WALL-MOUNT THERMOSTAT SWITCH - GWMT1

For all Remote-Ready Models. The desired comfort setting can be selected on the wall thermostat and the log heater will automatically cycle from pilot to the heat setting selected.

WALL-MOUNT ON/OFF SWITCH GWMS2

For all Remote-Ready Models. Allows the gas log heater to be turned on and off with a wall switch.

DAMPER CLAMP - GA6080

For Remote-Ready and Variable Manually-Controlled Models. Permanently opens chimney flue damper for vented operation.

LAVA ROCK - GA6060

For all models. Order when additional rock is desired.

FLOOR MEDIA KIT - FM100

For all models. Includes lava rock, burner embers, and burner cinders

CONTROL COVER KIT - CC100

For all models. Includes control cover log and 6 unique fall-away logs.

FMI PRODUCTS, LLC LIMITED WARRANTIES

New Products

Standard Warranty: FMI PRODUCTS, LLC warrants this new product and any parts thereof to be free from defects in material and workmanship for a period of four (4) years from the date of first purchase from an authorized dealer provided the product has been installed, maintained and operated in accordance with FMI PRODUCTS, LLC's warnings and instructions.

For products purchased for commercial, industrial or rental usage, this warranty is limited to 90 days from the date of first purchase.

Factory Reconditioned Products

Limited Warranty: FMI PRODUCTS, LLC warrants factory reconditioned products and any parts thereof to be free from defects in material and workmanship for 30 days from the date of first purchase from an authorized dealer provided the product has been installed, maintained and operated in accordance with FMI PRODUCTS, LLC's warnings and instructions.

Terms Common to All Warranties

The following terms apply to all of the above warranties:

Always specify model number and serial number when contacting the manufacturer. To make a claim under this warranty the bill of sale or other proof of purchase must be presented.

This warranty is extended only to the original retail purchaser when purchased from an authorized dealer, and only when installed by a qualified installer in accordance with all local codes and instructions furnished with this product.

This warranty covers the cost of part(s) required to restore this product to proper operating condition and an allowance for labor when provided by a FMI PRODUCTS, LLC Authorized Service Center or a provider approved by FMI PRODUCTS, LLC. Warranty parts must be obtained through authorized dealers of this product and/or FMI PRODUCTS, LLC who will provide original factory replacement parts. Failure to use original factory replacement parts voids this warranty.

Travel, handling, transportation, diagnostic, material, labor and incidental costs associated with warranty repairs, unless expressly covered by this warranty, are not reimbursable under this warranty and are the responsibility of the owner.

Excluded from this warranty are products or parts that fail or become damaged due to misuse, accidents, improper installation, lack of proper maintenance, tampering, or alteration(s).

This is FMI PRODUCTS, LLC's exclusive warranty, and to the full extent allowed by law; this express warranty excludes any and all other warranties, express or implied, written or verbal and limits the duration of any and all implied warranties, including warranties of merchantability and fitness for a particular purpose to four (4) years on new products and 30 days on factory reconditioned products from the date of first purchase. FMI PRODUCTS, LLC makes no other warranties regarding this product.

FMI PRODUCTS, LLC's liability is limited to the purchase price of the product, and FMI PRODUCTS, LLC shall not be liable for any other damages whatsoever under any circumstances including indirect, incidental, or consequential damages.

Some states do not allow limitations on how long an implied warranty lasts or the exclusion or limitation of incidental or consequential damages, so the above limitation or exclusion may not apply to you.

This warranty gives you specific legal rights, and you may also have other rights which vary from state to state.

For information about this warranty contact:
